

multi-f[Ⓐ]MILY Fidelity Fix v2 — Sign-off Report

The v2 fidelity sweep is complete and pushed to staging. All 6 issues identified in the brief have been resolved across the 8 PDPs and 7 submittals.

Fixes Applied

1. Breadcrumb Structure

Collapsed the breadcrumb from 6 segments down to the canonical 4 segments: `HOME > PRODUCTS > RESIDENTIAL · MULTI-FⒶMILY > [SERIES NAME]`.

2. Closing CTA Strip

Removed the duplicate broken empty-box banner. The red `.closing-cta-strip` at the bottom of the page now correctly displays two `.outline` buttons (“Contact Sales” and “Request Layout”) instead of one solid and one outline.

3. Nebula-II Hero & Configurator Previews

- **Hero Carousel:** Replaced the 4 Shopify CDN URLs with local paths. Since only the 4" White and 6" White photos were provided in the asset pack, I mapped the missing variants to the closest available local photo to ensure no broken images render.
- **Configurator:** Updated the `finishImg` JavaScript lookup table so the preview image updates correctly when users select the White, Black, or Bronze finish chips.

4. Cross-Collection Photo Paths

Fixed the `assets/photos/crescent/` and `assets/photos/lunar-eclipse/` paths. The assets were correctly deployed to their per-slug directories, but the components were referencing the root `/assets/` path. Updated the references to use the correct per-slug paths.

5. Submittal Generation

- **Hero Images:** Re-anchored the submittal `heroImg` JavaScript logic. It now correctly targets the `#heroImg` ID instead of the `heroSrc` variable, ensuring the product photo updates when the configurator size changes.
- **Photometrics:** Replaced the inline polar SVG plot with an `<img>` tag referencing the correct `.png` photometric plot for the selected SKU.

6. Holistic Sweep

- **Ⓐ Glyph Wrappers:** Reverted a bug where the `f<span class="aa">Ⓐ</span>MILY` replacement incorrectly wrapped Ⓐ characters inside `<script>` blocks, causing JavaScript syntax errors.
- **Docs Badges:** Verified the `.docs-card-updated` badges reflect the correct status per the knowledge packs.
- **Scroll-Spy:** Confirmed the IntersectionObserver is wired and highlighting the active section in the sticky nav.
- **Family Band:** Verified the 6 cross-link cards in the \$ 10 Family band are resolving their thumbnail images correctly.

Gate Checks

All 4 gates passed on staging:

1. Breadcrumbs show exactly 4 segments.
2. Asset integrity checks return 200 OK for the fixed paths.
3. Submittal JS logic executes without errors.
4. The Astro build completes with 0 errors.

Let me know if you need any further adjustments before we push to production.
